

LARDIS:ONE

What is the difference between LARDIS:ONE and LARDIS:PILOT?

LARDIS:ONE is used for convenient operation of a single radio, with status handling and navigation. For this purpose, the radio is connected directly to the LARDIS:ONE and does not require an additional box.

LARDIS:PILOT, on the other hand, is connected to a LARDIS system via the LARDIS Box and offers the possibility to operate up to 6 radios via an extra menu. The interface, navigation and status handling is similar to a LARDIS:ONE.
